目录

1、神策數據 IOS SDK 4.0.3支持 APP 打通 H5 测试报告	3
---	---

一、神策數據 iOS SDK 4.0.3 支持 App 打通 H5 報測試報告

測試項	iOS SDK 4.0.3 是可以支持 App 和 H5 打通
測試項準備	<p>1、App 端集成 v4.0.3 版本的 SDK，開啟打通</p> <pre>SACConfigOptions *options = [[SACConfigOptions alloc] initWithServerURL:@"https://a...n/sa?token=..."]; launchOptions:launchOptions]; options.enableLog = YES; [[SensorsAnalyticsSDK startWithConfigOptions:options]; [[SensorsAnalyticsSDK sharedInstance] addWebViewUserAgentSensorsDataFlag:YES];</pre> <pre>-(void)webView:(WKWebView *)webView decidePolicyForNavigationAction:(WKNavigationAction *)navigationAction decisionHandler:(void (^)(WKNavigationActionPolicy))decisionHandler{ // 刪除注入的 JS 腳本 WKUserContentController *user = [[WKUserContentController alloc] init]; [user removeAllUserScripts]; if ([[SensorsAnalyticsSDK sharedInstance] showUpWebView:webView WithRequest:navigationAction.request enableVerify:YES]) { decisionHandler(WKNavigationActionPolicyCancel); return; } // 在這裡添加您的邏輯代碼 decisionHandler(WKNavigationActionPolicyAllow); }</pre> <p>2、H5 端集成 JS SDK，開啟打通</p> <pre><script charset="UTF-8"> var sensors = window['sensorsDataAnalytic201505']; sensors.init({ server_url: 'https://a...n/sa?token=...', heatmap: {scroll_notice_map: 'not_collect'}, is_track_single_page: true, use_client_time: true, show_log: true, use_app_track: true }); sensors.quick('autoTrack');</pre>
	3、把 H5 內嵌在 App 裡面，準備測試打通

測試過程	<p>1、把 H5 頁面內嵌在 App 裡面，運行 App，展示 H5 頁面</p> <p>2、點擊 H5 頁面裡的按鈕，觸發點擊事件，在 Xcode 控制台可以看到 H5 事件</p>
預期結果	<p>1.在 Xcode 可以看待 track event from H5 開頭的日誌</p> <p>2.H5 的事件裡帶有\$wifi、\$network_type、\$carrie、\$app_version、\$device_id 等屬性</p>
測試結果	<pre>[track event from H5] : { "_flush_time" = 1638349851233; "_hybrid_h5" = 1; "_track_id" = 4000440047; "anonymous_id" = "35311009-851F-4855-8677-F8F741788D8B"; "distinct_id" = "35311009-851F-4855-8677-F8F741788D8B"; event = "\$pageview"; lib = { "\$app_version" = "1.0"; "\$lib" = js; "\$lib_method" = code; "\$lib_version" = "1.19.11"; }; properties = { "\$app_id" = "com.sensorsdata.dafengdemo"; "\$app_name" = dafengdemo; "\$app_version" = "1.0"; "\$device_id" = "35311009-851F-4855-8677-F8F741788D8B"; "\$is_first_day" = 1; "\$is_first_time" = 0; "\$latest_referrer" = "url的domain解析失败"; "\$latest_search_keyword" = "url的domain解析失败"; "\$latest_traffic_source_type" = "url的domain解析失败"; "\$lib" = js; "\$lib_version" = "1.19.11"; "\$manufacturer" = Apple; "\$model" = "x86_64"; "\$network_type" = WIFI; "\$os" = iOS; "\$os_version" = "15.0"; "\$referrer" = ""; "\$referrer_host" = ""; "\$screen_height" = 812; "\$screen_width" = 375; "\$timezone_offset" = "-480"; "\$title" = ""; "\$url" = "http://172.21.4.110/web.html"; "\$url_path" = "/web.html"; "\$wifi" = 1; }; time = 1638349851264; type = track; }</pre>
是否可以打通	是
